Category	Finding Name	Short Description	Brief Formulation
Overall Attacking Performance	Strong attacking output	Team generates substantially more xG than the benchmark.	xGF/match percentile >= 80
Overall Attacking Performance	Elite attacking output	Exceptional expected-goal production.	xGF/match percentile >= 90
Overall Attacking Performance	Weak attacking output	Team generates substantially less xG than the benchmark.	xGF/match percentile <= 20
Overall Attacking Performance	Very weak attacking output	Exceptionally low xG production.	xGF/match percentile <= 10
Overall Attacking Performance	High goal output	Team scores at a high rate.	Goals/match percentile >= 80
Overall Attacking Performance	Low goal output	Team scores at a low rate.	Goals/match percentile <= 20
Overall Attacking Performance	Strong attacking process	High xG production supported by strong chance creation or shot quality.	xGF/match percentile >= 80 + supporting creation/quality finding
Overall Attacking Performance	Poor attacking process	Low xG production supported by weak chance creation or shot quality.	xGF/match percentile <= 20 + supporting creation/quality finding
Overall Attacking Performance	Goals outperforming process	Actual goals substantially exceed expected output.	Goals - xGF >= meaningful threshold
Overall Attacking Performance	Goals underperforming process	Actual goals substantially trail expected output.	Goals - xGF <= -meaningful threshold
Overall Attacking Performance	Clinical attacking output	Team scores at a high rate relative to its xG.	Goals/xGF percentile >= 80
Overall Attacking Performance	Under-conversion	Team generates chances but converts below expectation.	Goals/xGF percentile <= 20 + sufficient xGF
Chance Creation	High shooting volume	Team produces a large number of shots.	Shots/match percentile >= 80
Chance Creation	Low shooting volume	Team produces relatively few shots.	Shots/match percentile <= 20
Chance Creation	High open-play shooting volume	High volume of shots from open play.	Shots_open_play/match percentile >= 80
Chance Creation	Low open-play shooting volume	Limited open-play shot production.	Shots_open_play/match percentile <= 20
Chance Creation	High penalty shot volume	Penalties contribute significantly to shot volume.	Shots_penalty/Shots percentile >= 85
Chance Creation	Low penalty dependency	Little attacking shot volume comes from penalties.	Shots_penalty/Shots percentile <= 20
Chance Creation	High corner shot volume	Corners generate a significant number of shots.	Shots_corner/match percentile >= 80
Chance Creation	High free-kick shot volume	Free kicks generate substantial shooting volume.	Shots_free_kick/match percentile >= 80
Chance Creation	High 1v1 opportunity volume	Team frequently creates one-on-one shooting opportunities.	one_on_one_shots/match percentile >= 80
Chance Creation	Low 1v1 opportunity volume	Few one-on-one shooting opportunities.	one_on_one_shots/match percentile <= 20
Chance Quality	High shot quality	Team's average shot carries high expected-goal value.	xGF/Shots percentile >= 80
Chance Quality	Low shot quality	Team takes many relatively low-value shots.	xGF/Shots percentile <= 20
Chance Quality	High open-play shot quality	Open-play shots are particularly valuable.	xGF_open_play/Shots_open_play percentile >= 80
Chance Quality	Low open-play shot quality	Open-play shooting consists largely of low-value attempts.	xGF_open_play/Shots_open_play percentile <= 20
Chance Quality	Strong box chance quality	Inside-box opportunities carry high xG value.	xGF_open_play_inbox/Shots_open_play_inbox percentile >= 80
Chance Quality	Weak box chance quality	Inside-box shots are lower quality than benchmark.	xGF_open_play_inbox/Shots_open_play_inbox percentile <= 20
Chance Quality	Outside-box shot dependency	Significant attacking threat comes from outside-box attempts.	xGF_open_play_outbox/xGF_open_play percentile >= 80 and/or outbox shot share >= 80
Chance Quality	Strong box-oriented profile	High proportion of open-play xG comes from inside the box.	xGF_open_play_inbox/xGF_open_play percentile >= 80
Chance Quality	Limited box penetration	Relatively little open-play xG comes from inside the box.	xGF_open_play_inbox/xGF_open_play percentile <= 20
Chance Quality	Efficient chance selection	High xG per shot combined with strong box share.	xG/shot percentile >= 80 + inbox xG share percentile >= 80
Chance Quality	Volume without quality	Many shots but relatively poor xG per shot.	Shots/match percentile >= 80 + xG/shot percentile <= 30
Chance Quality	Low volume, high quality	Few shots but relatively valuable opportunities.	Shots/match percentile <= 30 + xG/shot percentile >= 80
Attacking Profile	Open-play dominant attack	Most attacking xG comes from open play.	xGF_open_play/xGF percentile >= 80
Attacking Profile	Set-piece dependent attack	Unusually large share of xG comes from set pieces.	Set-piece xG/xGF percentile >= 80
Attacking Profile	Low set-piece reliance	Attacking output is overwhelmingly open-play based.	Set-piece xG/xGF percentile <= 20
Attacking Profile	Balanced attacking sources	Open play and set pieces contribute relatively normally.	Neither open-play nor set-piece xG share is extreme
Attacking Profile	Penalty-dependent xG	Penalties account for an unusually large portion of total xG.	xGF_penalty/xGF percentile >= 90
Attacking Profile	Corner-dependent xG	Corners account for an unusually large xG contribution.	xGF_corner/xGF percentile >= 85
Attacking Profile	Free-kick dependent xG	Free kicks contribute unusually large attacking xG.	xGF_free_kick/xGF percentile >= 85
Attacking Profile	Set-piece strength	Set-piece xG is high in absolute terms.	Set-piece xG/match percentile >= 80
Attacking Profile	Open-play weakness masked by set pieces	Overall xG is acceptable but open-play xG is weak while set-piece xG is strong.	xGF percentile >= 50 + open-play xGF percentile <= 30 + set-piece xGF percentile >= 80
Set Pieces	Strong corner threat	Corners consistently generate significant xG.	xGF_corner/match percentile >= 80
Set Pieces	Weak corner threat	Corners produce little xG.	xGF_corner/match percentile <= 20
Set Pieces	Corner finishing overperformance	Goals from corners significantly exceed corner xG.	goals_corner - xGF_corner >= meaningful threshold
Set Pieces	Corner finishing underperformance	Goals from corners significantly trail corner xG.	goals_corner - xGF_corner <= -meaningful threshold
Set Pieces	Strong free-kick threat	Free kicks produce substantial xG.	xGF_free_kick/match percentile >= 80
Set Pieces	Weak free-kick threat	Free kicks produce little xG.	xGF_free_kick/match percentile <= 20
Set Pieces	Free-kick overperformance	Goals from free kicks exceed expected output.	goals_free_kick - xGF_free_kick >= meaningful threshold
Set Pieces	Free-kick underperformance	Goals from free kicks trail expected output.	goals_free_kick - xGF_free_kick <= -meaningful threshold
Finishing	Clinical finishing	Team scores substantially more than expected from its chances.	Goals - xGF >= meaningful threshold
Finishing	Finishing underperformance	Team scores substantially fewer than expected.	Goals - xGF <= -meaningful threshold
Finishing	Exceptional overperformance	Goals materially exceed xG at an extreme level.	Goals - xGF percentile >= 90
Finishing	Exceptional underperformance	Goals materially trail xG at an extreme level.	Goals - xGF percentile <= 10
Finishing	Finishing broadly in line with xG	Actual output closely matches expected output.	abs(Goals - xGF) is small
Finishing	High conversion of shooting opportunities	High proportion of shots become goals.	Goals/Shots percentile >= 80
Finishing	Low conversion	Low proportion of shots become goals.	Goals/Shots percentile <= 20
Finishing	Open-play finishing strength	Open-play goals outperform open-play xG.	Goals_open_play - xGF_open_play >= meaningful threshold
Finishing	Open-play finishing weakness	Open-play goals underperform open-play xG.	Goals_open_play - xGF_open_play <= -meaningful threshold
Finishing	Penalty conversion strength	Penalty conversion rate is high.	goals_penalty/shots_penalty percentile >= 80 + minimum penalties
Finishing	Penalty conversion weakness	Penalty conversion rate is low.	goals_penalty/shots_penalty percentile <= 20 + minimum penalties
Aerial Attack	Strong aerial scoring threat	Headers contribute substantial attacking xG.	xGF_headers/match percentile >= 80
Aerial Attack	Low aerial threat	Headers contribute little attacking xG.	xGF_headers/match percentile <= 20
Aerial Attack	High header shot volume	Team takes many headed attempts.	shots_headers/match percentile >= 80
Aerial Attack	Low header shot volume	Few headed attempts.	shots_headers/match percentile <= 20
Aerial Attack	High-value aerial opportunities	Header attempts carry relatively high xG.	xGF_headers/shots_headers percentile >= 80
Aerial Attack	Low-quality aerial shooting	Many headers but low average xG.	shots_headers percentile >= 70 + xGF_headers/shots_headers percentile <= 30
Aerial Attack	Aerial finishing overperformance	Header goals exceed expected header xG.	goals_headers - xGF_headers >= meaningful threshold
Aerial Attack	Aerial finishing underperformance	Header goals trail expected header xG.	goals_headers - xGF_headers <= -meaningful threshold
Attacking Profile	High 1v1 opportunity creation	Team frequently creates one-on-one shooting situations.	one_on_one_shots/match percentile >= 80
Attacking Profile	Low 1v1 opportunity creation	Few one-on-one shooting opportunities.	one_on_one_shots/match percentile <= 20
Attacking Profile	1v1-dependent attack	One-on-one opportunities make up an unusually large share of shots.	one_on_one_shots/Shots percentile >= 85
Attacking Profile	Low reliance on 1v1 opportunities	1v1 situations represent a small share of shots.	one_on_one_shots/Shots percentile <= 20
Defending	Strong defensive process	Team restricts opponents to low xG.	xGA/match percentile <= 20
Defending	Elite defensive process	Exceptionally low xGA.	xGA/match percentile <= 10
Defending	Weak defensive process	Opponents generate substantial xG.	xGA/match percentile >= 80
Defending	Very weak defensive process	Exceptionally high xGA.	xGA/match percentile >= 90
Defending	Low goals conceded	Team concedes few actual goals.	Goals_conceded/match percentile <= 20
Defending	High goals conceded	Team concedes frequently.	Goals_conceded/match percentile >= 80
Defending	Defensive overperformance	Fewer goals conceded than expected.	Goals_conceded - xGA <= -meaningful threshold
Defending	Defensive underperformance	More goals conceded than expected.	Goals_conceded - xGA >= meaningful threshold
Defending	Strong defensive process, poor outcomes	xGA is good but goals conceded are high.	xGA percentile <= 25 + Goals_conceded percentile >= 70
Defending	Poor defensive process masked by outcomes	Goals conceded are low despite high xGA.	xGA percentile >= 75 + Goals_conceded percentile <= 30
Defensive Shot Suppression	Strong shot suppression	Opponents take relatively few shots.	op_shots/match percentile <= 20
Defensive Shot Suppression	Poor shot suppression	Opponents generate high shot volume.	op_shots/match percentile >= 80
Defensive Shot Suppression	Strong open-play shot suppression	Opponents are restricted to few open-play attempts.	op_shots_open_play/match percentile <= 20
Defensive Shot Suppression	Poor open-play shot suppression	Opponents generate many open-play shots.	op_shots_open_play/match percentile >= 80
Defensive Shot Suppression	Opponent high 1v1 volume	Opponents frequently reach one-on-one shooting situations.	op_one_on_one_shots/match percentile >= 80
Defensive Shot Suppression	Opponent low 1v1 volume	Team limits opponent 1v1 shooting opportunities.	op_one_on_one_shots/match percentile <= 20
Defensive Chance Quality	Low opponent shot quality	Opponents shoot frequently but from relatively poor positions.	xGA/op_shots percentile <= 20
Defensive Chance Quality	High opponent shot quality	Opponents' shots are unusually dangerous.	xGA/op_shots percentile >= 80
Defensive Chance Quality	Strong box protection	Opponents generate little xG from inside the box.	xGA_open_play_inbox/match percentile <= 20
Defensive Chance Quality	Weak box protection	Opponents generate high inside-box xG.	xGA_open_play_inbox/match percentile >= 80
Defensive Chance Quality	Strong outside-box containment	Opponents generate little outside-box threat.	xGA_open_play_outbox/match percentile <= 20
Defensive Chance Quality	Outside-box concession profile	Opponent attack contains unusually high outside-box xG.	xGA_open_play_outbox/xGA_open_play percentile >= 80
Defensive Chance Quality	High-quality chances conceded	Opponent shot quality is high even if shot volume isn't.	xGA/op_shots percentile >= 80
Defensive Chance Quality	Volume but low quality conceded	Opponents shoot frequently but generate low-quality chances.	op_shots/match percentile >= 80 + xGA/op_shots percentile <= 30
Defensive Profile	Vulnerable inside the box	Large share of opponent open-play xG comes from inside the box.	Opponent IB xG share percentile >= 80
Defensive Profile	Strong central/box protection	Opponent inside-box xG share is unusually low.	Opponent IB xG share percentile <= 20
Defensive Profile	Outside-box concession tendency	Opponent xG is disproportionately generated outside the box.	Opponent OB xG share percentile >= 80
Defensive Profile	Opponent shot-quality problem	Defensive issue is primarily quality rather than quantity.	op_shots percentile <= 50 + xGA/op_shots percentile >= 80
Defensive Profile	Opponent volume problem	Defensive issue is primarily shot volume rather than quality.	op_shots percentile >= 80 + xGA/op_shots percentile <= 50

Defensive Profile	Volume and quality defensive weakness	Opponents both shoot frequently and generate high-value attempts.	op_shots percentile >= 80 + xGA/op_shots percentile >= 80
Defensive Set Pieces	Strong set-piece defence	Opponents generate little xG from set pieces.	Opponent set-piece xG/match percentile <= 20
Defensive Set Pieces	Weak set-piece defence	Opponents generate substantial set-piece xG.	Opponent set-piece xG/match percentile >= 80
Defensive Set Pieces	Corner vulnerability	Opponent corners produce unusually high xG.	xGA_corner/match percentile >= 80
Defensive Set Pieces	Strong corner defence	Opponent corners produce little xG.	xGA_corner/match percentile <= 20
Defensive Set Pieces	Free-kick vulnerability	Opponent free kicks generate high xG.	xGA_free_kick/match percentile >= 80
Defensive Set Pieces	Strong free-kick defence	Opponent free kicks generate low xG.	xGA_free_kick/match percentile <= 20
Defensive Set Pieces	Penalty vulnerability	High proportion of defensive xG comes from penalties.	xGA_penalty/xGA percentile >= 90
Defensive Set Pieces	Low penalty exposure	Very little xGA comes from penalties.	xGA_penalty/xGA percentile <= 20
Aerial Defence	Strong aerial defence	Opponent headers generate little xG.	xGA_headers/match percentile <= 20
Aerial Defence	Weak aerial defence	Opponent headers generate substantial xG.	xGA_headers/match percentile >= 80
Aerial Defence	High aerial vulnerability	Headers account for an unusually large share of xGA.	xGA_headers/xGA percentile >= 80
Aerial Defence	Low aerial exposure	Headers contribute little to opponent xG.	xGA_headers/xGA percentile <= 20
Defensive Outcomes	Open-play defensive weakness	Large proportion of goals conceded come from open play.	goals_conceded_open_play/goals_conceded percentile >= 80
Defensive Outcomes	Set-piece concession dependency	Set pieces account for a large share of conceded goals.	Set-piece conceded goals/goals_conceded percentile >= 80
Defensive Outcomes	Corner concession problem	Corners contribute disproportionately to conceded goals.	goals_conceded_corner/goals_conceded percentile >= 80
Defensive Outcomes	Free-kick concession problem	Free kicks contribute disproportionately to conceded goals.	goals_conceded_free_kick/goals_conceded percentile >= 80
Defensive Outcomes	Aerial concession problem	Headers account for a high proportion of conceded goals.	goals_conceded_headers/goals_conceded percentile >= 80
Defensive Outcomes	Penalty concession problem	Penalties account for a high proportion of conceded goals.	goals_conceded_penalty/goals_conceded percentile >= 80
Defensive Efficiency	Open-play defensive overperformance	Concedes fewer open-play goals than expected.	goals_conceded_open_play - xGA_open_play <= -meaningful threshold
Defensive Efficiency	Open-play defensive underperformance	Concedes more open-play goals than expected.	goals_conceded_open_play - xGA_open_play >= meaningful threshold
Defensive Efficiency	Corner defensive overperformance	Concedes fewer corner goals than expected.	goals_conceded_corner - xGA_corner <= -meaningful threshold
Defensive Efficiency	Corner defensive underperformance	Concedes more corner goals than expected.	goals_conceded_corner - xGA_corner >= meaningful threshold
Defensive Efficiency	Free-kick defensive overperformance	Concedes fewer free-kick goals than expected.	goals_conceded_free_kick - xGA_free_kick <= -meaningful threshold
Defensive Efficiency	Free-kick defensive underperformance	Concedes more free-kick goals than expected.	goals_conceded_free_kick - xGA_free_kick >= meaningful threshold
Composite Attack	Strong attacking process	High xG production combined with strong chance quality.	xGF/match percentile >= 75 + xG/shot percentile >= 75
Composite Attack	Strong but inefficient attack	Team creates strong chances but fails to convert them.	xGF percentile >= 75 + xG/shot percentile >= 75 + Goals-xGF percentile <= 20
Composite Attack	Efficient attack	Strong chance creation combined with above-average finishing.	xGF percentile >= 75 + xG/shot percentile >= 70 + Goals-xGF percentile >= 60
Composite Attack	Volume without quality	High shot volume but weak chance quality.	Shots percentile >= 80 + xG/shot percentile <= 30
Composite Attack	Low-volume efficiency	Few shots but consistently high-value chances.	Shots percentile <= 30 + xG/shot percentile >= 80
Composite Attack	Box-oriented attack	High xG with strong inside-box contribution.	xGF percentile >= 70 + IB xG share percentile >= 80
Composite Attack	Outside-box reliant attack	Low-quality/outside-box shooting is a major component of attack.	OB shot share percentile >= 80 + OB xG share percentile >= 70
Composite Attack	Open-play attacking strength	Strong xG generated independently of set pieces.	Open-play xGF/match percentile >= 80
Composite Attack	Set-piece reliant attack	Set pieces make an unusually large contribution to overall threat.	Set-piece xG share percentile >= 80
Composite Attack	Penalty-inflated attacking output	Total xG is strongly influenced by penalties.	xGF_penalty/xGF percentile >= 90 + xGF percentile >= 70
Composite Defence	Strong defensive process	Low xGA combined with strong shot suppression or quality control.	xGA percentile <= 25 + (opponent shots percentile <= 35 or opponent xG/shot percentile <= 35)
Composite Defence	Poor defensive process	Opponents generate high volume and/or high-quality chances.	xGA percentile >= 75 + supporting volume/quality finding
Composite Defence	Strong shot suppression, weak shot-quality control	Few shots conceded, but those shots are dangerous.	op_shots percentile <= 30 + opponent xG/shot percentile >= 75
Composite Defence	High volume, low-quality concession	Opponents shoot often but from poor positions.	op_shots percentile >= 80 + opponent xG/shot percentile <= 30
Composite Defence	High-volume, high-quality defensive weakness	Opponents both shoot often and create dangerous chances.	op_shots percentile >= 80 + opponent xG/shot percentile >= 80
Composite Defence	Strong box protection	Low opponent inside-box xG and share.	opponent IB xG percentile <= 25 + opponent IB xG share percentile <= 30
Composite Defence	Box vulnerability	Opponents consistently create high-value chances inside the box.	opponent IB xG percentile >= 75 + opponent IB xG share percentile >= 75
Composite Defence	Set-piece defensive weakness	High opponent set-piece xG relative to overall defensive performance.	opponent set-piece xG percentile >= 80
Composite Defence	Set-piece results masking process	Low conceded goals despite high set-piece xGA.	set-piece goals conceded low + set-piece xGA high
Process vs Outcome	Attack outperforming process	Scoring output is substantially above the underlying xG process.	Goals - xGF materially positive
Process vs Outcome	Attack underperforming process	Scoring output is substantially below the underlying xG process.	Goals - xGF materially negative
Process vs Outcome	Defence outperforming process	Goals conceded are substantially below xGA.	Goals conceded - xGA materially negative
Process vs Outcome	Defence underperforming process	Goals conceded are substantially above xGA.	Goals conceded - xGA materially positive
Process vs Outcome	Attack process and output aligned	Actual scoring closely matches expected scoring.	abs(Goals - xGF) small
Process vs Outcome	Defence process and output aligned	Goals conceded closely match expected goals conceded.	abs(Goals conceded - xGA) small
Process vs Outcome	Potential attacking regression	Goals materially exceed xG without equally strong underlying process.	Goals > xGF materially + sufficient sample
Process vs Outcome	Potential defensive regression	Goals conceded materially trail xGA.	Goals conceded < xGA materially + sufficient sample
Process vs Outcome	Potential attacking rebound	Goals materially trail xG despite strong underlying xGF.	Goals < xGF materially + xGF percentile high
Process vs Outcome	Potential defensive improvement	Goals conceded exceed xGA while xGA process is improving.	Goals conceded > xGA + improving xGA trend
Trend	Attacking improvement	Underlying attacking xG production is improving.	Trend(xGF/match) materially positive
Trend	Attacking decline	Underlying attacking xG production is declining.	Trend(xGF/match) materially negative
Trend	Chance quality improvement	Average chance quality is improving.	Trend(xG/shot) materially positive
Trend	Chance quality decline	Average chance quality is declining.	Trend(xG/shot) materially negative
Trend	Box penetration improvement	Share of open-play xG generated inside the box is increasing.	Trend(IB xG share) materially positive
Trend	Outside-box dependency increasing	Outside-box threat is becoming a larger part of the attack.	Trend(OB xG share) materially positive
Trend	Shot volume increasing	Team is producing more shots over time.	Trend(shots/match) materially positive
Trend	Shot volume declining	Team is producing fewer shots over time.	Trend(shots/match) materially negative
Trend	Finishing improving	Goals relative to xG are improving.	Trend(Goals-xGF) materially positive
Trend	Finishing deteriorating	Goals relative to xG are deteriorating.	Trend(Goals-xGF) materially negative
Trend	Defensive improvement	Underlying xGA is improving.	Trend(xGA/match) materially negative
Trend	Defensive decline	Underlying xGA is deteriorating.	Trend(xGA/match) materially positive
Trend	Shot suppression improving	Opponent shot volume is decreasing.	Trend(op_shots/match) materially negative
Trend	Shot suppression declining	Opponent shot volume is increasing.	Trend(op_shots/match) materially positive
Trend	Box protection improving	Opponent inside-box xG is decreasing.	Trend(opponent IB xG/match) materially negative
Trend	Box vulnerability increasing	Opponent inside-box xG is increasing.	Trend(opponent IB xG/match) materially positive
Trend Composite	Attack improving through better chance creation	Attack is improving mainly through greater chance volume.	Trend(xGF) positive + Trend(shots) positive + Trend(xG/shot) stable
Trend Composite	Attack improving through better chance quality	Attack is improving mainly through better shot quality.	Trend(xGF) positive + Trend(xG/shot) positive
Trend Composite	Attack becoming more efficient	Team creates more valuable chances without relying on higher volume.	Trend(xG/shot) positive + shots stable/decreasing
Trend Composite	Attack becoming more volume dependent	Shot volume rises while average shot quality falls.	Trend(shots) positive + Trend(xG/shot) negative
Trend Composite	Attack becoming more box-oriented	Share of xG generated inside the box is increasing.	Trend(IB xG share) positive
Trend Composite	Attack increasingly reliant on set pieces	Set pieces are becoming a larger share of attacking threat.	Trend(set-piece xG share) positive
Trend Composite	Defensive improvement through shot suppression	Defensive xG improves as opponent shot volume falls.	Trend(op_shots) negative + Trend(xGA) negative
Trend Composite	Defensive improvement through shot-quality suppression	Defensive xG improves as opponent shot quality falls.	Trend(opponent xG/shot) negative + Trend(xGA) negative
Trend Composite	Defensive deterioration through box vulnerability	Defensive performance worsens alongside increased opponent box threat.	Trend(opponent IB xG) positive + Trend(xGA) positive
Trend Composite	Finishing driving recent improvement	Recent scoring improvement is driven primarily by finishing rather than xG growth.	Trend(Goals-xGF) positive + Trend(xGF) stable
Trend Composite	Underlying process driving improvement	Performance is improving through stronger chance creation rather than finishing variance.	Trend(xGF) positive + Trend(Goals-xGF) stable
